| PRODUCT: | L-LAS-TB CCD-Line-Laser-Sensor-Series | Date: | 21.10.2009 |
| | PC Software - L-LAS-TB-Scope V3.11 | | (wk) |
| TOPIC: | RS232-Interface-Protocol for L-LAS-TB Sensors | | |

RS232 Interface-Protocol PC ⇄ L-LAS-TB Sensor **Firmware Version 3.1x**

- Standard RS232 serial interface, no hardware handshake
- 3-wire-connection: GND, TXD, RXD
- Speed: 9600 baud, 19200 baud, 38400 baud, 57600 baud oder 115200 baud
- 8 data-bits
- NO parity-bit
- 1 stop-bit
- binary-mode.

The control device (PC or PLC) have to send a frame of *18-words* (*1 word = 2 byte = 16 bit*) to the *L-LAS-TB* hardware. All words must be transmitted in binary format. The most significant byte must be transmitted first (MSB-first).

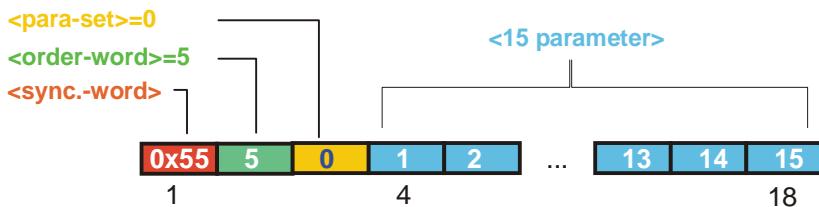

METHOD:

The microcontroller of the *L-LAS-TB* sensor is permanently reading (polling) the input-buffer of the RS-232 module. If the incoming word = **0x0055** (0x55 hexadecimal = 85 decimal), this is interpreted as the synchronisation-event (**<sync-word>**). After this, the 2.nd word with the order number (**<order-word>**) is read in by the microcontroller.

The order word (**<order-word>**), is followed by a further word, which contents parameter-set number 0 or 1 (**<para-set>**). The para-set-word is followed by 15 further words **<parameter-word>**, which contents the actual parameters.

Afer reading the complete data-frame (18-words = 36 bytes), the *L-LAS-TB* sensor-hardware executes the order which is coded at the 2.nd word (**<order-word>**) of the data-frame (c.f. order-table).

SEND parameter-set = 0 to L-LAS-RAM <order-word> = 1

<order-word> = 1 <para-set> = 0

Send the actual parameter (set=0) into the RAM of the L-LAS-sensor

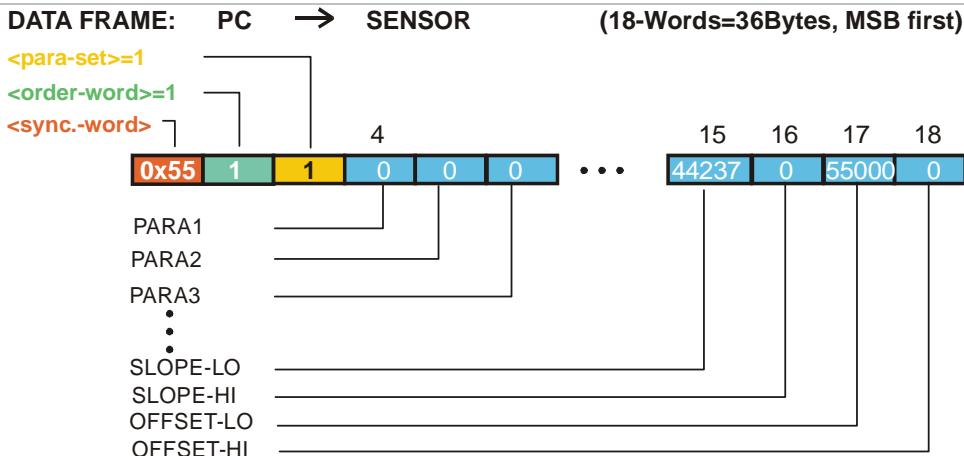

The transmitted data-frame is automatically echoed back by the L-LAS sensor !

SEND parameter-set = 1 to L-LAS-RAM <order-word> = 1

<order-word> = 1 <para-set> = 1

Send the actual parameter (set=0) into the RAM of the L-LAS sensors

SLOPE-VALUE is multiplied with x16384 e.g. 2.7[μm/pixel] x 16384 = 44237

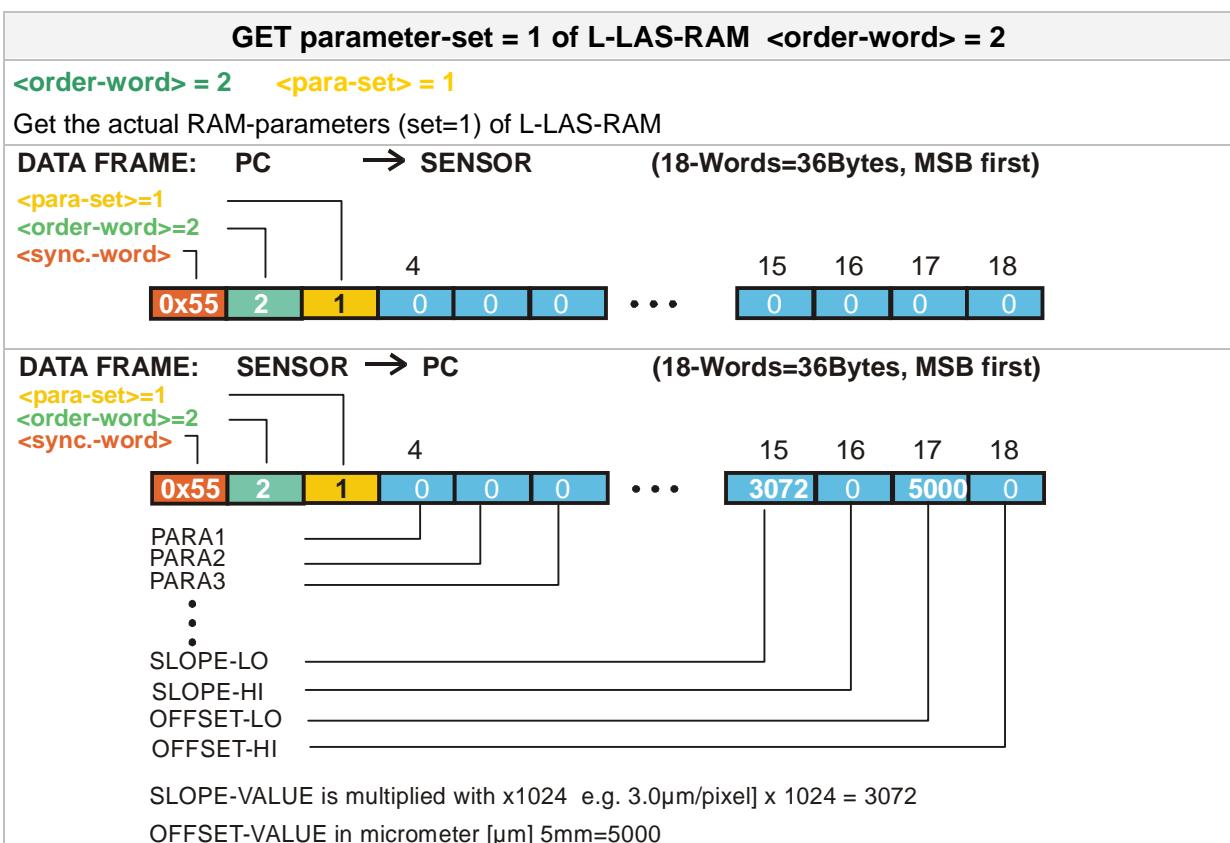

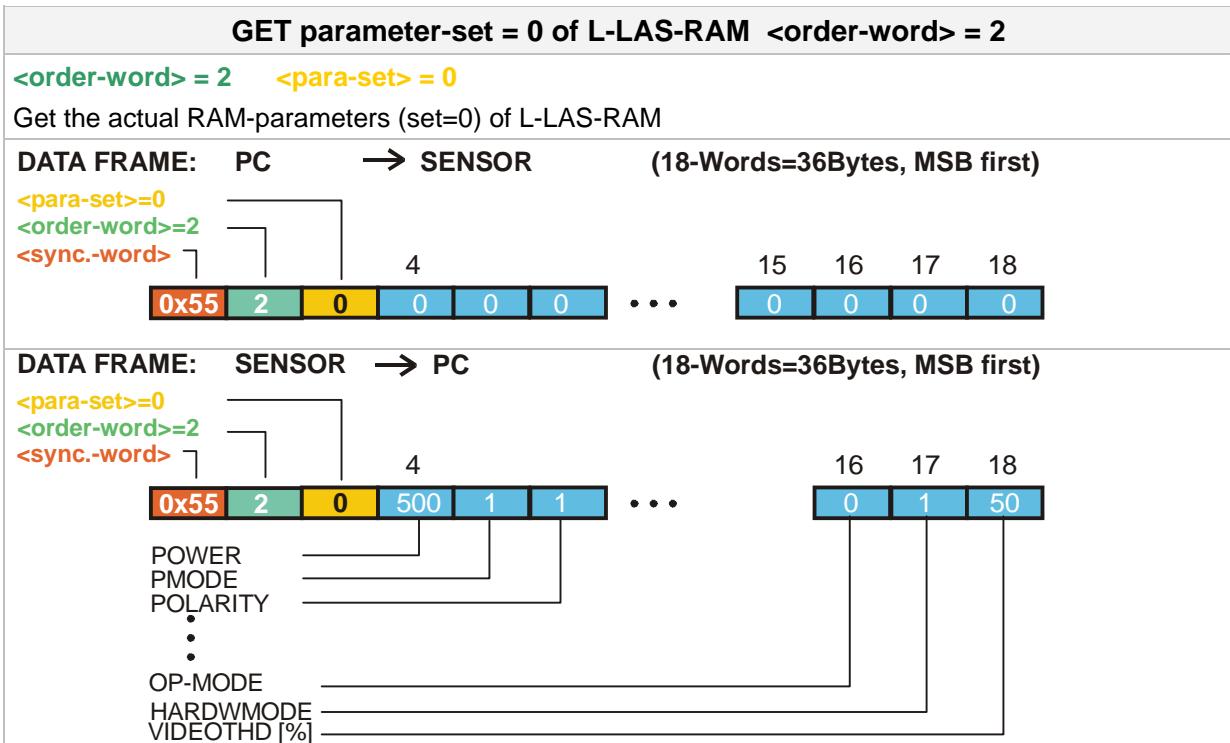

OFFSET-VALUE in micrometer [μm] 55mm=55000[μm]

The transmitted data-frame is automatically echoed back by the L-LAS sensor !

To activate the full parameter set (set 0 and set 1) at the L-LAS-sensor, both parameter sets (para-set-0 and para-set-1) must be transmitted!

Attention !

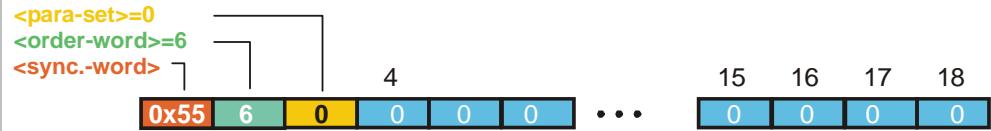

TEACH-FUNCTION <order-word> = 6

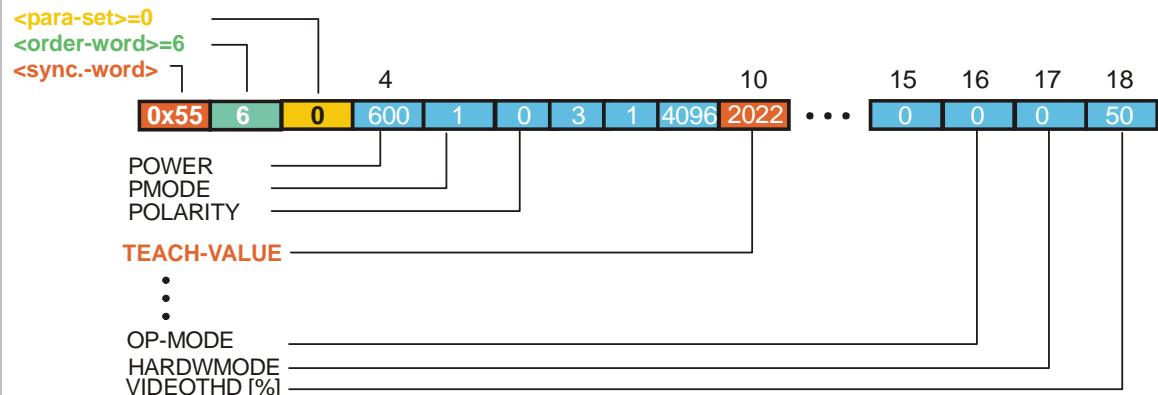

<order-word> = 6 <para-set> = 0

Start teach-procedure at L-LAS-sensor. The 10. word of the echo contents the new teach-value.

Example μm-Value: 75.584mm = 75584μm = LowWord (10049) + HighWord (1x65535)

Change baudrate: <order-word> = 190

<order-word> = 190

Change rs-232-baudrate at the L-LAS Sensor.

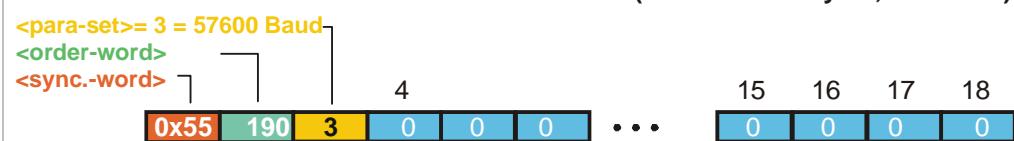

The new baudrate-parameter is transmitted in the 3.rd word <para-set>.

9600 baud = 0, 19200 baud = 1, 38400 baud = 2, 57600 baud = 3, 115200 baud = 4

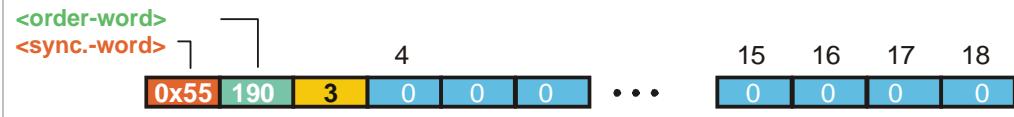

The transmitted data-frame is automatically echoed back from the L-LAS Sensor by using the old baudrate!!

The new baudrate is stored in the RAM-memory (volatile). To change the baudrate permanently this must be done by the parameter RS-232-BAUD of the second parameter-set=1 by saving the parameter frame to the EEPROM (c.f. order = 3).
